

Super Inverter Low Wall System

Our EASYfit Low-Wall air conditioners are specially designed to be effective on Dwarf Walls in Conservatories. They comprise two elements - an internal and an external unit. The internal unit is fitted onto the Dwarf Wall in the Conservatory whilst the external unit is situated outside the building. The two are connected using copper pipe. The external unit or condenser removes the heat from the room and dissipates it outside along with any condensation that's built-up in the system whilst the internal unit provides cooling.
